

## Kontent Machine Review

[Kontent Machine](#) is relatively new beast to create fully automated written content with just couple of mouse clicks. The application can produce written content relevant to your keywords and generates numerous articles or blog posts with photos, contextual links and video clips integrated randomly.

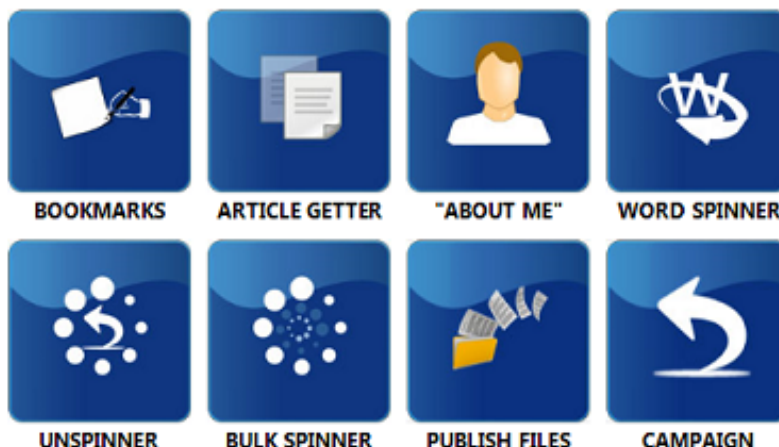

**Kontent Machine enables you to quickly produce content to be used inside your backlink building campaigns.**

In case you don't have content of your very own, you are able to type in three keywords you would like to rank under and Kontent Machine will find relevant content based on your research preferences.

KM will use all of the keywords or phrases you entered to collect content from various article sites. Generally the content creation tool will scrape it's content of article directories.

**Check the video below to get an over of what Kontent Machine can do for you!**

Campaign: New | Blueprint: None

3.28.21.113

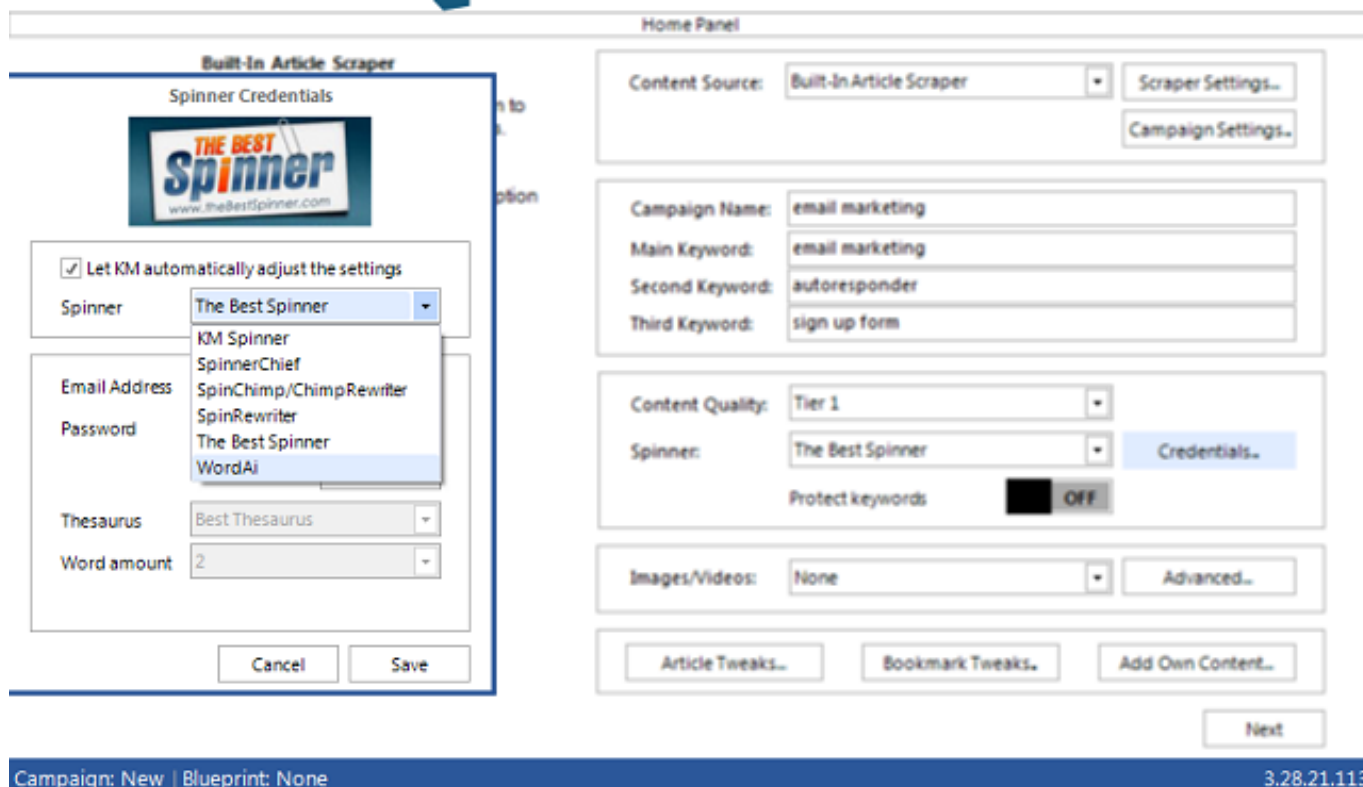

[divider]

First choose the content source, you have 4 options:

1. Built-in article scraper
2. Built-In Article Scraper + Local files
3. Local Saved Files (no spinning)
4. Leading Articles (get free access [here](#))

After you entered a campaign name which you want the project to be saved under. It's time to enter the keywords your content will be based on. First enter a main, then a second and a third keyword. (Second and third keyword are optional.)

When you have determined your keywords you have the option to select the content quality. There are three qualities to choose from Tier 1, Tier, Tier 3. You also have the option to customize quality settings... You can set scraping- and word-spinning options, as well as how many sentences you'd like per paragraph.

The screenshot shows the 'Home Panel' of the Kontent Machine interface. On the left, a 'Built-In Article Scraper' settings panel is open, displaying 'Spinner Credentials' for 'The Best Spinner'. The panel includes a checkbox for 'Let KM automatically adjust the settings', a 'Spinner' dropdown menu (currently set to 'The Best Spinner'), fields for 'Email Address', 'Password', and 'Thesaurus' (set to 'Best Thesaurus'), and a 'Word amount' dropdown (set to '2'). On the right, the 'Home Panel' contains several configuration sections: 'Content Source' (set to 'Built-In Article Scraper'), 'Campaign Name' (set to 'email marketing'), 'Main Keyword' (set to 'email marketing'), 'Second Keyword' (set to 'autoresponder'), and 'Third Keyword' (set to 'sign up form'). Below these are 'Content Quality' (set to 'Tier 1') and 'Spinner' (set to 'The Best Spinner') with a 'Credentials...' button. A 'Protect keywords' toggle is set to 'OFF'. At the bottom, there are buttons for 'Images/Videos' (set to 'None'), 'Article Tweaks...', 'Bookmark Tweaks...', 'Add Own Content...', and a 'Next' button. A status bar at the bottom indicates 'Campaign: New | Blueprint: None' and the version '3.28.21.113'.

After entering the keywords and quality settings you can choose if you'd like to use built-in kontent machine spinner (km-spinner) or if you would like to use one of the many supported third party applications. Kontent Machine supports many different [spin tools](#) (see image above). Simply enter your credentials and your ready to go.

You can also choose if you want images and videos automatically added to your articles. This feature comes in handy when using simple auto posting software like [FCS Networker](#) or [Rankwyz](#). If you are using software like [GSA Search Engine Ranker](#) oder [SEnuke XCr](#) you might want to add images and videos with more options there.

Kontent Machine does not only create articles. It creates titles, tags and categories for the articles as well. But that not all! The Kontent Machine also creates titles, content, tags and categories for bookmarking pages!

This tool can quickly create a very large amount of content and prepare it in multiple formats for the most popular backlinking tools available.

Here is a list of software the Kontent Machine can prepare projects for:

1. [GSA Search Engine Ranker](#)
2. Magic Submitter
3. Ultimate Demon
4. [SEnuke XCr](#)
5. Article Marketing Robot
6. Sick Submitter (Article and Bookmarks)
7. Article Kevo
8. Licorne AIO
