

The Best Spinner Review

[The Best Spinner](#) (TBS) might not need an introduction as it's by far the most popular spinning software available. The spinning software was created by Jon Leger back in 2009 and has received many updates since.

Content spinning is creating content with code (known as syntax) which will replace or set variations of synonyms, sentences and even paragraphs.

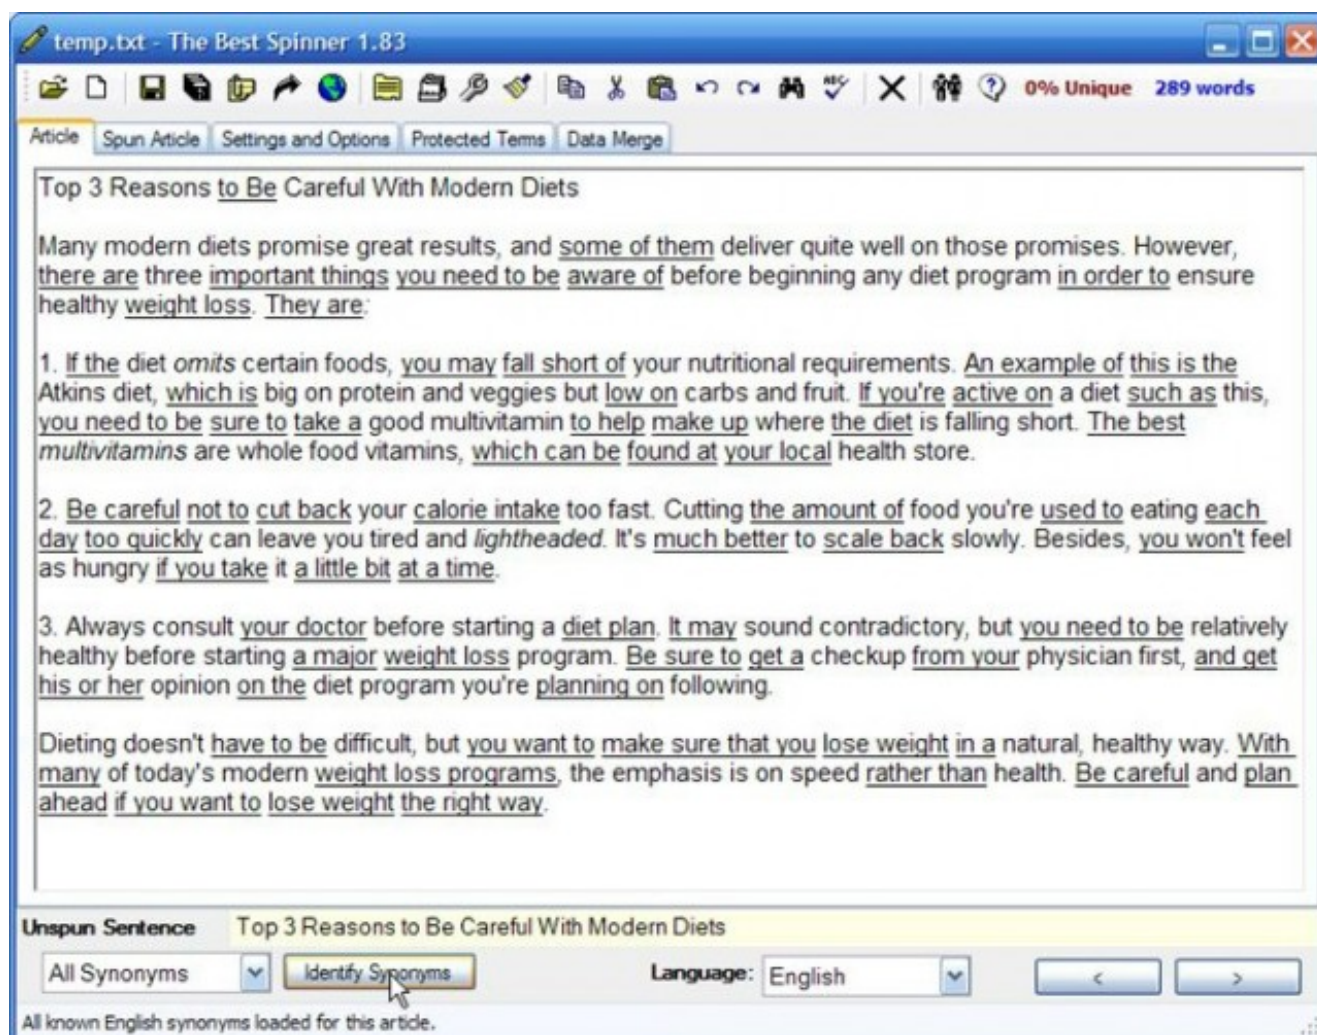

The Best Spinner allows you to spin an unlimited number of articles and makes article marketing and back-linking strategies relatively easy.

The spin tool is probably one of the most used spinning tools in the world today. The Best Spinner includes German, French, Spanish, Italian, Swedish and Portuguese (both Brazilian and Portuguese) thesauri and also features support for building a custom thesaurus for any language.
